From 1946 to 1948 work progressed on the Kalashnikov rifle. In 1949 one of his designs, the Avtomat Kalashnikova (AK-47), was accepted by the Soviet Army and quickly became the standard assault rifle. The AK-47 is a gas-operated, magazine-fed, selective-fire rifle designed by Mikhail Kalashnikov, who designed the accepted version of the weapon in 1947. It is one of the most widely used rifles in the world. This initial design represented a significant improvement over the M16 and M14 rifles.
