<p>First published at:</p>
<p><http://adamsinfo/playing-poker-on-linux/></p>
<p>Linux is always gaining</p>
<p>popularity on the desktop. Playing poker on Linux isn't that hard and
you've got a few</p>
<p>options:</p>
<p>1. Find something web or flash based. Poker Room, Euro Poker and Hollyw
ood</p>
<p>Poker are a few examples of sites that offer that.</p>
<p></p>
<p>2. Java is a cross platform SDK.</p>
<p>Absolute Poker, Party Poker, Poker Room, and quite a few ot
hers offer Java play.</p>
<p>3.</p>
<p>Wine. I managed to get my favorite poker site Titan Poker working perf
ectly in Wine.</p>
<p>Here are instructions for debian based systems:</p>
<p>`apt-get install wine`</p>
<p>`wget`</p>
<p>`/setup.exe`</p>
<p>`wine ./setup.exe`</p>
<p>It's that easy! If you get a regsvr32 error during setup,</p>
<p>it is safe to ignore it.</p>
<p>Double click Titan Poker which will now have appeared on in</p>
<p>`~/Desktop/Titan Poker`</p>
<p>It works well, graphic and game quality is the same as Windo
ws,</p>
<p>sound also works with the right Wine configuration.</p>
<p>If any online players are reading,</p>
<p>I'd personally recommend signing up at Stoxpoker <http://stoxpoker> as a
fantastic</p>
<p>training site.</p>
