Is there any way to predict what number it will choose? The Google random Number generator is designed to produce numbers that are statistically random, meaning they should not follow any discernible pattern or be predictable. It uses a pseudorandom number generator (PRNG) algorithm, specifically the Mersenne Twister, which is a type of linear congruential generator (LCG). The output of these generators is not truly random but is designed to approximate true randomness. Instead, they rely on a deterministic algorithm to generate a sequence of numbers that appear random.
